[Acland Microvascular Surgery](#)

Robert D. Acland, MBBS, FRCS was a surgeon and academic credited with being one of the pioneers in plastic and reconstructive microsurgery. He was the younger son of Richard Acland and his wife Anne. He developed one of the first microsurgical instruments, the Acland micro-vessel clamp, as well as the 10-0 nylon sutures and needles that are still used today. He published the first edition of Acland's Practice Manual for Micro-vascular Surgery, also known as the "Red Book", a ...

[Acland's Practice Manual for Microvascular Surgery](#)

The reason for the third edition and the changes are well described by Dr. Acland in the preface. The 2nd edition was published in 1989 and in the present one they have pruned many topics which would not be of much use today or are well known and understood (like the suppliers of microscopes, sutures, etc.). In addition, the authors have taken efforts redoing and refining many illustrations. The book considered as the bible for the micro trainees had only things related to the micro course ...

The Microvascular Practice Card is a pocketbook-sized card that has silicone tubes affixed to it. On the card, 6 small-diameter, 4-cm-long tubes side by side are arranged in 4 directions with both ends secured. The tubes are available in diameters of 2.0, 1.0, 0.5, and 0.3 mm. The thickness of the tube wall is 0.05 or 0.1 mm.

Senior house office jobs followed in Northampton, Mansfield, and at United Oxford Hospitals, where Acland did a rotation in plastic surgery. It was the experience of attending a course where he saw John Cobbett—who had undertaken the first total thumb transfer—perform a microvascular anastomosis that focused Acland's interest on microsurgery. "He saw the limitations of the instrumentation and felt he could design something better," said McGrouther.

The field of plastic and reconstructive surgery is credited for the development of vessel anastomosis and consequently anatomic free flap designs. To his credit, I humbly point out the small but significant work of Dr. Robert Acland on the initial development of microsurgical instruments as well as the 10-0 nylon sutures we still use today. It was in those early days of microsurgical history ...

Acland 9 in 1972 published a series showing 95% patency in anastomosed rat superficial epigastric arteries. Since Smith's 10 and Cobbett's 11 reviews of microsurgical instruments and techniques, suture technology has progressed to 50micm needles with 12-0 suture. In 1962 Malt and McKhann¹² described the first successful clinical replantations in 2 patients who had arm amputations. In 1963 ...

Acland clamps are used to hold the vessels at the right length and provide a stable platform to keep the vessels in focus. A simple green backing provides an antiglare surface and a good contrast. The vessels should be lined across the operative field if possible as this makes the ergonomics of anastomosis easier. All parts of loose adventitia should be trimmed as strand of adventitia close to ...
