PRIMARY PREVENTION. Primary prevention generally involves the prevention of diseases and conditions before their biological onset. This can be done in a variety of ways, such as preventing environmental exposures, improving human resistance to disease, or education to diminish risk-taking behaviors.

For many health problems, a combination of primary, secondary and tertiary interventions are needed to achieve a meaningful degree of prevention and protection. However, as this example shows, prevention experts say that the further "upstream" one is from a negative health outcome, the likelier it is that any intervention will be effective.

In the following we will focus on those aspects of prevention and health promotion that are amenable to a stringent evaluation. We will describe a general roadmap to primary prevention where we discuss each step from the identification of target groups up to the transfer into practice. The various steps will be illustrated using three studies that are conducted by the Bremen Institute of ...

BACKGROUND: Evidence supports the implementation of primary prevention and health promotion (PP&HP) activities but primary care (PC) professionals show resistance to implementing these activities. The aim was to synthesize the available qualitative research on barriers and facilitators identified by PC physicians and nurses in the implementation of PP&HP in adults.

The goal of health promotion programs (including primary prevention) is to improve the quality of life for communities. To do this, epidemiologic data is used to find the cause or source of the problem, identify risk factors, and then determine occurrence rates. The first step is mass education or immunization through efforts defined as primary prevention. The impact of primary prevention in ...
