[Non Hodgkins Lymphomas](#)

Ein Non-Hodgkin-Lymphom (NHL) ist ein bösartiger Tumor, der das Lymphgewebe befällt. Es gibt eine Vielzahl verschiedener Formen von Non-Hodgkin-Lymphomen mit unterschiedlichen Prognosen. Typisch für ein Non-Hodgkin-Lymphom sind geschwollene Lymphknoten und die sogenannte B-Symptomatik (Fieber, Nachtschweiß, Gewichtsverlust). Männer erkranken häufiger als Frauen. Das durchschnittliche Erkrankungsalter liegt bei etwa 60 Jahren. Die Therapie hängt vom entarteten Zelltyp und vom Stadium ...

Which non-Hodgkin's lymphoma treatments are right for you depends on the type and stage of your disease, your overall health, and your preferences. Treatment isn't always necessary. If your lymphoma appears to be slow growing (indolent), a wait-and-see approach may be an option. Indolent lymphomas that don't cause signs and symptoms may not require treatment for years. Delaying treatment doesn't ...

Non-Hodgkin's lymphoma is cancer that originates in your lymphatic system, the disease-fighting network spread throughout your body. In non-Hodgkin's lymphoma, tumors develop from lymphocytes — a type of white blood cell. Non-Hodgkin's lymphoma is more common than the other general type of lymphoma — Hodgkin lymphoma. Many different subtypes of non-Hodgkin's lymphoma exist. Diffuse large B-cell lymphoma and follicular lymphoma are among the most common subtypes.

Symptoms of non-Hodgkin lymphoma. The most common symptom of non-Hodgkin lymphoma is a painless swelling in a lymph node, usually in the neck, armpit or groin. Lymph nodes, also known as lymph glands, are pea-sized lumps of tissue found throughout the body. They contain lymph nodes cells that help to fight against infection.

[Non-hodgkin lymphoma - causes, symptoms, diagnosis, treatment, pathology](#)

Non-Hodgkin's lymphoma is considered the more common type of lymphoma. There are an estimated 70,000 new cases per year in the United States. Hodgkin's lymphoma, however, is even more rare than non-Hodgkin's. It is estimated that there are only 8,000 new cases each year nationwide. Who is affected by Non-Hodgkin's and Hodgkin's lymphoma? The average age for people diagnosed with ...

[Survival | non-Hodgkin lymphoma | Cancer Research UK](#)

Aggressive Non-Hodgkin's Lymphomas (NHLs) are fast growing cancers (as opposed to indolent cancers). They involve the B-cells or T-cells of the immune system and often present as tumors in the lymph nodes. These high-grade cancers will move into the advanced stages much faster than indolent, low-grade tumors.

[Lymphoma—Patient Version - National Cancer Institute](#)

Non-Hodgkin lymphomas, which are defined as being all lymphomas except Hodgkin lymphoma, are more common than Hodgkin lymphoma. A wide variety of lymphomas are in this class, and the causes, the types of cells involved, and the prognosis vary by type. The number of cases per year of non-Hodgkin lymphoma increases with age. It is further divided into several subtypes.

[Non-Hodgkin Lymphoma - Lymphoma Canada](#)

Non-Hodgkin's lymphoma can be divided into two general clinical categories: indolent lymphomas, the most common forms [...] of which include follicular [...] lymphomas which tend to grow relatively slowly; and aggressive lymphomas, which include diffuse large B-cell lymphomas (DLBCL), which grow more rapidly.
