"Dan Falk's book provides perhaps the best guide to the scientific worldview prevailing in the Elizabethan Age. We learn, for example, about what Giordano Bruno did while in England, about Thomas Harriot's telescopic view of the Moon's surface drawn some months before Galileo's, and of the appearance of atoms in several of Shakespeare's plays. Falk's narrative voice is smooth, reasonable, likable." (Phillip Schewe 2016-10-01)
